

Baby BIBS

baby brain imaging & behavior study

UCLA Researchers are studying early development in infants at both low and elevated risk for autism

Infants are considered at low risk if they have:

- An older sibling with typical development and no family history of autism

Infants are considered at elevated risk if they have:

- An older sibling with autism
-- or --
- A genetic risk for autism based on a diagnosis of Tuberous Sclerosis Complex or 22q11.2 deletion syndrome

Participating families will receive:

- \$50 for each visit to UCLA
- Developmental feedback
- A picture of your baby's brain
- Free intervention if eligible

This study involves several visits to UCLA starting at 6 weeks and will include:

- Non-invasive EEG and MRI
- Developmental Assessments
