

UCLA Research Study for Kids & Teens with

Obsessive-Compulsive Disorder

We are studying the use of a mobile application along with standard treatment for OCD

Does your child have OCD? Does he/she:

- Have recurring thoughts that make no sense, but makes her/him feel bad?
- Wash excessively or have a fear touching "contaminated" things?
- Check and double-check more than really necessary?
- Have to do things over and over again?

Eligible participants will:

- Receive a free 12-week course of standard psychological treatment, known as exposure and response prevention (ERP)
- Be randomized into either ERP or ERP + Phone App
