

Neurodevelopment and Early Social-Emotional Trajectories In NICU Graduates

This study is led by Nicole McDonald, PhD, in collaboration with the UCLA High-Risk Infant Follow-up Clinic and Autism Center of Excellence as part of a larger program studying early development in infants

Your baby may be eligible for this study if he/she:

- Is 6 months old or younger (adjusted age)
- Has a history of Neonatal Intensive Care Unit (NICU) hospitalization

This study involves several visits to UCLA during your baby's first years and will include:

- Developmental and play-based assessments (both virtual and in person)
- Non-invasive EEG

Your family will receive:

- Feedback on developmental assessments
- \$30-50 per study visit
- Free parking
